Office Action Summary		Application No.	Applicant(s)				
		10/717,016	SHAMSAIFAR, KHOSRO				
		Examiner	Art Unit				
		Pablo N. Tran	2618				
Period fo	The MAILING DATE of this communication app or Reply	ears on the cover sheet with the c	orrespondence addre	ss			
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).							
Status

DETAILED ACTION

Page 2

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-6 and 16-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Eidson et al. (6,529,716) in view of Porambo et al. (5,280,638) and further in view of Ala-Kojola (5,298,873).

As per claims 1 and 16, Eidson et al. disclosed a tunable power amplifier having at least one input matching circuit (fig. 2/item Matching Elements) receiving an RF signal from an RF input and creating a first output RF signal, a first amplifier (fig. 2/no. 20) receiving said first output RF signal from said at least one input matching circuit and creating a second output signal, said second output signal providing input for at least one inter-stage matching circuit (fig. 2), said at least one inter-stage matching circuit creating a third output signal, a second amplifier (fig. 2/no. 22) receiving said third output signal and creating a fourth output signal, and an output matching circuit (fig. 2) receiving said fourth output signal and generating an RF output signal; and a embedded controller (fig. 2/item Bias Control, col. 4/ln. 57-col. 5/ln. 15) associated with

said input matching circuit, inter-stage matching circuit and output matching circuit, for frequency tuning control.

Eidson et al. teach such matching elements (fig. 2) but not explicitly including voltage tunable varactor to enable center frequency tuning. However, Porambo et al. suggested such matching circuit having varactor to enable center frequency (fig. 3/no. 36 & 38, col. 4/ln. 54-col. 5/ln. 4). Therefore, it would have been obvious to one of ordinary skill in the art to provide such matching circuitry, as taught by Porambo et al., to the matching elements of Eidson et al. in order to effectively tuned to the desired frequency.

The modified communication of Eidson et al. and Porambo teach such varactor but not explicitly a dielectric varactor. However, such dielectric varactors are disclosed by Ala-Kojola (col. 2/ln. 1-7). Therefore, it would have been obvious to one of ordinary skill in the art to provide such dielectric varactors, ad disclosed by Ala-Kojola, to the modified communication of Eidson et al. and Porambo in order to effectively tuned to the center frequency.

As per claims 2 and 17, the modified communication system of Eidson et al., Porambo et al., and Ala-Kojola further disclosed at least one additional inter-stage matching circuit (see Eidson et al., fig. 2/item Matching Elements).

As per claims 3 and 18, as stated above in claim 1, the modified communication system of Eidson et al., Porambo et al., and Ala-Kojola further disclosed at least one inter-stage matching circuit includes at least one tunable varactor to enable center

Art Unit: 2618

frequency tuning (see Eidson et al., fig. 2, see Porambo et al., fig. 3/no. 36 & 38, col. 4/ln. 54-col. 5/ln. 4).

As per claims 4 and 19, as stated above in claim 1, the modified communication system of Eidson et al., Porambo et al., and Ala-Kojola further disclosed at least one output matching circuit includes at least one tunable varactor to enable center frequency tuning (see Eidson et al., fig. 2, see Porambo et al., fig. 3/no. 36 & 38, col. 4/ln. 54-col. 5/ln. 4).

As per claims 5 and 20, the modified communication system of Eidson et al., Porambo et al., and Ala-Kojola. further disclosed at least one additional inter-stage matching circuits is one additional inter-stage matching circuit (see Eidson et al., fig. 2/item Matching Elements).

As per claims 6 and 21, the modified communication system of Eidson et al., Porambo et al., and Ala-Kojola further disclosed at least one additional inter-stage matching circuit is two additional inter-stage matching circuits (see Eidson et al., fig. 2/item Matching Elements).

Response to Arguments

- 3. Applicant's arguments with respect to claims 1 and 16 have been considered but are most in view of the new ground(s) of rejection.
- 4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, THIS ACTION IS MADE FINAL. See MPEP §

Application/Control Number: 10/717,016

than SIX MONTHS from the date of this final action.

Art Unit: 2618

706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR

Page 5

1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later

Conclusion

- 5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Pablo Tran whose telephone number is (571)272-7898. The examiner normal hours are 9:30 -5:00 (Monday-Friday). If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Edward Urban, can be reached at (571)272-7899. The fax phone number for the organization where this application or proceeding is assigned is (571)273-8300.
- 6. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) System. Status information for published applications may be obtained from either Private PAIR or Public PAIR.

 Status information for unpublished applications is available through Private PAIR only.

Application/Control Number: 10/717,016

Art Unit: 2618

For more information about the PAIR system, see httpr//pair-directauspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
